60L Industrial Vacuum

This guide provides step-by-step instructions for assembling, operating, and maintaining your MAXBLAST 60L Industrial Vacuum.

Product Information

60L Industrial Vacuum

Description

The MAXBLAST 60L Industrial Vacuum is built for demanding cleaning tasks in warehouses, workshops, and commercial spaces. Powered by a 1400W motor, it efficiently handles both wet and dry materials.

It comes with four attachments, including two floor brushes, a bristle nozzle, and a crevice tool, making it suitable for a wide range of surfaces. The dual filtration system ensures reliable performance and cleaner air output.

A durable stainless steel drum, 60-litre capacity, and smooth castor wheels make it easy to use, empty, and manoeuvre—ideal for keeping large areas clean with minimal effort.

Product specifications

Technical Information

Voltage	230 / 50 Hz
Power	1400 W
Amperage	10 A
Air Flow	45 L/S
Noise Level	80 dB
Filter	Cloth and HEPA Filter

SKU

10679

Dimensions

50.5 x 45 x 96.5 CM

Weight

16Kg

Capacity

60L

Product Features

1. Vacuum Attachment
2. Pedestal
3. Stainless Steel Drum
4. Vacuum Hose
5. Handle
6. Power Switch
7. Drain Hose
8. Wheel

Safety Advice

Please read through the safe working practice to ensure prevention of injury or damage to the device.

- Do not use the machine if the power cord is frayed or damaged.
- When the device is not in use ensure that the power plug is removed from the socket. This will prevent damage to the appliance through power surges.
- This appliance can be dangerous if the power cord or wires come into contact with water.
- Clean this product after use and unplug the appliance from the wall whilst cleaning.
- Do not overwork the machine.
- If damaged, do not operate the machine.
- Do not pour water on the electrical housing or near the vents.
- Appropriate clothing must be worn whilst operating this machine.
- Keep clean to prolong the life.
- Do not jam the air inlet mouth.
- Do not operate near combustible and explosive areas/items.
- Do not vacuum combustible, explosive or sharp items.
- Do not turn the machine upside down.
- When repairing, remove plug from power supply.
- Keep away from bright sunlight and high temperatures.
- To clean, do not pour water on it. Wipe down and dry with a cloth.

Parts

HEPA Filter	1	Dust Bag	1
Cloth Filter	1	Wet Floor Attachment	1
Bristle Attachment	1	Crevice Nozzle Attachment	1
Dry Floor Attachment	1		

Operation Instructions

1. Step One

Insert the hose connector into the air inlet mouth. Make sure the connector is securely fastened.

2. Step Two

Check the dual filter is in place for dry vacuuming. If you are wet vacuuming, remove everything from the drum. Place the power cord right at the back of the drum when in use. If you wish, before dry vacuuming, you can add the dust bag.

3. Step Three

Attach desired vacuum nozzle.

4. Step Four

Switch on at mains, and press 'On' button to power up.

Cleaning Care

1. Drum Cleaning

If you have noticed the suction has decreased, the drum is full. To empty:

1. First you need to switch off at the power supply.
2. Unfasten the locking knob and lift off the top cover.
3. Take off the filter bag and clean the dust away from the drum.
4. When empty, replace the clean filter bag and lock the top cover back into place.

2. Dual Filter Cleaning

The Cloth Filter and HEPA Filter should be washed with warm water. If required, you can use a soft cloth to wipe.

Remove the filter before cleaning and allow to dry before re-installing.

Note: The Dust Bag should not be washed, please ensure you are washing the Dual Filter, not the Dust Bag

Troubleshooting

1. Resolution Guide

Please read through the guide below if you have any issues or faults with your device. The information covers and resolves the majority of frequently asked questions.

Q: The vacuum has lost suction.

A: Ensure the vacuum is empty, the filter is clean and there are no blockages in the hose/attachment.

Q: There are parts missing from my order.

A: If there appears to be any part missing from your package contact our Customer Support team within 7 days of receipt. Details are on the Contact Us page.

Q: My industrial vacuum will not start.

A: Check the plug is attached to a power supply and the drum is empty. Check the fuse in the plug. When checking the fuse, ensure the vacuum is switched off at the mains. If it still will not start, simply call or email our Support Team. They will guide you through issues or arrange a date and time for us to collect the product and fix it with our 12 month guarantee.

Q: My hose attachment isn't working properly.

A: Check the vacuum filter as this can become blocked and need cleaning. The hose itself can also become obstructed by objects stuck in the pipe, so please check the hose for any blockages.
